Mariah,

Per your request, below is a brief description of the 2025 sanitary sewer pipe re-lining project that will be taking place this summer and fall in parts of Jonestown Borough.

NLCA will be performing a sewer rehabilitation project that will include the no-dig, non-disruptive installation of full length Cured-In-Place-Pipe (CIPP) lining. The CIPP liner will eliminate leaking pipe joints and restore the structural integrity of the existing asbestos cement sanitary sewer main and laterals within the project area.

The contractor hired by the Authority to complete the project is Snyder Environmental Services, Inc. Authority staff will also be involved with the project. Individual property cleanouts may need to be located on private property to effectively line customer laterals. Every attempt will be made to keep customers informed. There may be a brief interruption of sewer services while the individual lateral lining is being installed. Customers will be notified in advance of this work. Questions about the project can be answered by contacting the Authority office or by contacting Snyder Environmental directly. The contractor will be providing their contact number closer to the project starting date.
